

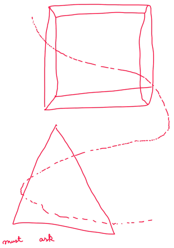
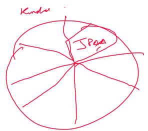
What I propose

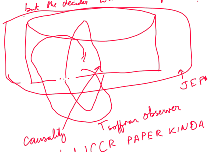


now One must ask
but guruji why
WTF

So what I wanna say is like we start This transformation of data
fress a new
via scattering in to fractoal
assymeteric bounds and phases aka hose
information travels to
legfht it,
what that clotted line is The observer like us
we dont know great mysteries of on
body but we use it
it will be combination transformer
inspired by "JEV' and "JEPA"
but I want to go primal
a dual layer structure was tried but The problem
was ain The "Oberseur' make ducusn while
JE PA uses causality side kinda The
beauty of this is defined in topology
basically we will have jepa as a phase
over higher dimesonal S2 sphere
like



So yes a truly topological transforce shall not pollute itself with JEPA, it will have J EPA as self attention have softmax small phases all around the sphere but the decider will be a softmax here?



Tsoffran observer bound of ICCR PAPER KINDA

Guruji now have tons for making a plan

→ New design Not JEPa, nor self attention

→ Newer dages

→ New repo So New rounds

→ its inspired by use of topology used in universe and our style of topology

→ Also the internal design of This should also be butterfly effect bonded via topology

→ Aim Fuck ALLEN TURING we Do Topo Logy

Guruji
